Activ 800 dL

HEAVY DUTY/NON-BUTYL CLEANER/DEGREASER

DESCRIPTION

A unique blend of surfactants, emulsifiers and quaternary ammonium compound now fortified with d-Limonene citrus solvent. Originally patented and developed for heavy industrial cleaning. The addition of d-Limonene now makes Activ 800 dL even more effective in removing petroleum, animal and vegetable oils and greases.

USES

Though Activ 800 dL can be used with a mop and bucket, its ultra fast action "spontaneous emulsifier" feature makes it a necessity for use with automatic scrubbers, power washers and other mechanical equipment where the solution is only in contact with the dirty surface for a second or two.

HOW TO USE

IN AN AUTO SCRUBBER: Dilute product 6-12 ounces per gallon of water depending on amount of soil present. Use hot water if possible.

FOR STEAM CLEANING: To the solution tank add 4 - 14 ounces per gallon of water. Adjust the solution tank valve to obtain amount of cleaner required for different soil conditions.

FOR SOAK TANKS AND ULTRASONIC CLEANING: Dilute 12 ounces Activ 800 dL per gallon of water. Solution can be used over and over.

FOR SPRAY CLEANING: Dilute at 6 ounces per gallon and adjust solution with more or less Activ 800 dL according to needs.

WITH MOP & BUCKET: For general maintenance of floors dilute 2 to 4 ounces of Activ 800 dL per gallon of water depending on degree of soil.

BENEFITS

SPONTANEOUS EMULSIFICATION: Emulsifies and liquefies greasy, oily soil immediately upon contact, making Activ 800 dL a must for use with auto scrubbers, pressure washers, etc., where the cleaning solution is only in contact with soil for a second or two.

FORTIFIED WITH CITRUS SOLVENT: Contains no butyl or other petroleum solvents, but does contain d-Limonene, a super effective natural solvent extracted from the skin of citrus fruit.

DEODORIZES: Has a pleasant odor of its own and deodorizes surfaces as it cleans.

NON-FLAMMABLE: Works like a solvent in removing greasy, oily soil but it is completely non-combustible and non-flammable.

SPECIFICATIONS

APPEARANCE.....Straw colored liquid
ODORCitrus
SPECIFIC GRAVITY1.060 ± 0.005
DENSITY8.85 ± 0.05 lb/gal
BOILING POINT.....Near 212°F
pH.....13.0 ± 0.5
FLASH POINTNone to boiling
STABILITYOne year minimum

DISTRIBUTED BY
