

RX- 420 FRAGRANCE-FREE SMOKE & ODOR ELIMINATOR

Helping you with Joint Commission and OSHA compliance.

The Occupational Safety and Health Administration (OSHA) and The Joint Commission (TJC) have established an alliance aimed at improving safety and health practices in healthcare environments. This alliance, reaffirmed in recent years, focuses on providing information, guidance, and access to training resources to address various occupational hazards, including those related to maintaining ultraclean facilities in healthcare settings.

Specifically, the alliance between OSHA and TJC looks to address the reduction and prevention of worker exposure to physical, chemical, biological, and airborne hazards in healthcare. This includes tackling issues related to the use of strong cleaning solutions which can leave chemical-smelling odors, potentially compromising the clean and healthful environment of healthcare facilities.

The specifics of standard EC.02.06.01 are understood that this emphasizes the importance of establishing and maintaining a safe, functional environment in hospitals. This includes ensuring patient areas are clean and free of offensive odors. The alliance's efforts contribute to raising awareness about the occupational safety and health laws and standards, including the rights and responsibilities of workers and employers in this context.

In line with these standards, environmental services managers in healthcare facilities are encouraged to consider safe, effective, and eco-friendly odor abatement solutions. These solutions ideally should not rely on fragrances to mask odors but should address a broad spectrum of odors through various delivery methods. This approach aligns with the overall goal of the OSHA-TJC alliance to improve worker and patient safety by reducing exposure to harmful chemicals and maintaining a healthful environment.

RX-420, Fragrance Free Smoke and Odor Eliminator addresses the issue of using perfume based deodorizers or other fragrances to potentially cover up foul odors.
